

Adler CRM

TestFlight Setup Guide (Developer)

Prerequisites

- Mac with Xcode installed
 - Apple Developer Program membership (\$99/year) — enroll at developer.apple.com/programs
 - Your Adler CRM Xcode project building successfully on a simulator or device
-

One-Time Setup

1. Create an App ID

1. Go to developer.apple.com/account
2. Click **Certificates, Identifiers & Profiles**
3. Click **Identifiers** in the left sidebar
4. Click the **+** button
5. Select **App IDs** → Continue
6. Select **App** → Continue
7. Description: **Adler CRM**
8. Bundle ID: Select **Explicit** and enter **com.adlerresources.crm**
9. Click **Continue** → **Register**

The Bundle ID must match your Xcode project exactly.

2. Create the App in App Store Connect

1. Go to appstoreconnect.apple.com
2. Click **My Apps**
3. Click **+** → **New App**
4. Platform: **iOS**
5. Name: **Adler CRM**
6. Primary Language: **English (U.S.)**
7. Bundle ID: Select **com.adlerresources.crm**
8. SKU: **adler-crm** (any unique string)
9. Click **Create**

3. Configure Xcode Project

1. Open your project in Xcode
2. Click the project name in the navigator (blue icon at top)
3. Select the **AdlerCRM** target
4. **General** tab:
 - Bundle Identifier: **com.adlerresources.crm**
 - Version: **1.0.0**
 - Build: **1** (increment each upload)
5. **Signing & Capabilities** tab:
 - Check **Automatically manage signing**
 - Team: Select your Apple Developer team

If no team appears: Xcode → Settings → Accounts → add your Apple ID.

Uploading a Build

Repeat these steps every time you want to send an update to testers.

Step 1: Set the Build Number

1. Click project → target **AdlerCRM** → **General** tab
2. Increment the **Build** number (e.g., 1 → 2 → 3)
3. The **Version** stays the same unless releasing a new version (e.g., 1.0.0 → 1.1.0)

Step 2: Archive

1. Set the device to **Any iOS Device (arm64)** in the toolbar — not a simulator
2. Go to **Product** → **Archive**
3. Wait for the build to complete (may take a few minutes)
4. The **Organizer** window opens automatically when done

Step 3: Upload

1. In the Organizer, select your latest archive
2. Click **Distribute App**
3. Select **TestFlight & App Store** → Next
4. Select **Upload** → Next
5. Leave all options at defaults → **Next** → review → **Upload**
6. Wait for the upload to complete

Step 4: Wait for Processing

1. Go to appstoreconnect.apple.com → My Apps → Adler CRM

2. Click the **TestFlight** tab
 3. Your build will show **Processing** — this takes 5–30 minutes
 4. Once it shows a green **Ready to Test**, proceed to add testers
-

Adding Testers

Option A: Internal Testers (Recommended)

People with App Store Connect accounts. Limit: 100 testers. No Apple review needed.

1. In App Store Connect, go to **Users and Access**
2. Click **+** to add a user
3. Enter their name and email (must be their Apple ID email)
4. Role: Select **App Manager**, **Developer**, or **Marketing**
5. Click **Invite**
6. Go to your app → **TestFlight** tab
7. Under **Internal Testing**, click **+** next to **App Store Connect Users**
8. Check the boxes for your testers → **Add**

They receive an email invitation immediately.

Option B: External Testers

No App Store Connect account needed. Just an email address. Limit: 10,000.

1. In your app's **TestFlight** tab, click **+** next to **External Testing**
2. Name the group (e.g., "Adler Team")
3. Click the group → **+** next to Testers → add emails
4. Go to **Builds** tab within the group → **+** → select your build
5. First time only: Apple does a brief review (usually 24–48 hours)

After approval, testers get an email invitation.

Sending Updates

When you make changes to the app:

1. Increment the **Build** number in Xcode
2. **Product** → **Archive**
3. **Distribute App** → **Upload**
4. Wait for processing in App Store Connect
5. Internal testers are notified automatically

6. External testers: you may need to add the new build to their group

Troubleshooting

"No accounts with App Store Connect access" error

Make sure your Apple ID is enrolled in the Apple Developer Program (\$99/year), not just a free account.

Archive option is grayed out

Make sure the device selector says "Any iOS Device" — you cannot archive when a simulator is selected.

Upload fails with signing error

Go to Signing & Capabilities, uncheck and recheck "Automatically manage signing", make sure the correct team is selected.

Build stuck on "Processing"

Usually resolves within 30 minutes. If longer than an hour, try uploading again with an incremented build number.

"Missing Compliance" warning in TestFlight

Click Manage next to the build, answer the encryption question: if you only use HTTPS (which you do), select "Yes" → uses exempt encryption → select "Qualifies for the exemption provided in Category 5, Part 2" → Save.
