

Adler CRM

Employee Installation Guide

What You Need

1. An iPhone running iOS 16 or later
2. The email address you gave your manager (linked to your Apple ID)
3. An internet connection

Step 1: Install TestFlight

TestFlight is a free app from Apple that lets you install apps shared by your company.

1. Open the **App Store** on your iPhone
2. Tap the **Search** tab at the bottom
3. Type **TestFlight** in the search bar
4. Find the app by Apple (blue and orange airplane icon)
5. Tap **Get** to install it

If you already have TestFlight installed, skip this step.

Step 2: Check Your Email

1. Open your email on your iPhone (use the same email address your manager has on file)
2. Look for an email from **App Store Connect** or **TestFlight** with a subject like "You're invited to test Adler CRM"
3. Open the email

Can't find the email? Check your spam or junk folder. If it's not there, ask your manager to resend the invitation.

Step 3: Accept the Invitation

1. In the invitation email, tap the **View in TestFlight** button
2. This opens the TestFlight app
3. Tap **Accept** when prompted
4. Tap **Install** to download the Adler CRM app

The app icon will appear on your home screen just like any other app.

Step 4: Open the App

1. Find the **Adler CRM** app on your home screen
 2. Tap it to open
 3. Log in with the username and password your manager provided
 4. Complete the two-factor authentication setup if prompted
-

Getting Updates

When your manager sends a new version of the app:

1. You'll receive a notification on your iPhone from TestFlight
2. Open **TestFlight**
3. Tap **Update** next to Adler CRM

Tip: Turn on automatic updates

1. Open **TestFlight**
 2. Tap **Adler CRM**
 3. Turn on **Automatic Updates**
-

Important Notes

- The app works exactly like a regular app — you can use it anytime
 - TestFlight apps have a small orange dot next to the name to show it's a test version
 - The app will expire after **90 days** — your manager will send a new version before that happens
 - Your data is stored on the company server, not on your phone — reinstalling the app won't affect your data
-

Troubleshooting

"View in TestFlight" button doesn't work

Make sure TestFlight is installed from the App Store first, then try tapping the button again.

"This invitation has expired"

Ask your manager to send a new invitation.

App crashes on startup

Make sure your iPhone is running iOS 16 or later. Go to Settings → General → Software Update to check.

Can't log in

Double-check your username (it's case-sensitive). If you forgot your password, ask your manager to reset it.

App disappeared from home screen

The TestFlight build may have expired. Open TestFlight to check. Ask your manager to upload a new build.

Need Help?

Contact your manager if you have any issues installing or using the app.
